Electricity and gas cost management

For many businesses, energy costs form a large portion of their expenses. Without the benefit of industry expertise, companies are often at the mercy of electricity and gas providers. That's where Professional Energy Services comes in. Armed with more than 30 years of global customer and supplier information and insights, we're in the strongest position to help you secure the best possible forward contracts available.

Professional Energy Services offers:

- Lowest rates and bespoke bill validation ensuring no overcharges
- Forward contract electricity to reduce the impact of rate rises
- An initial 10-minute consultation to determine if we can help your business
- Bulk tendering for greater buying power
- Consolidation of contracts and billing
- Access to supplier's senior management
- Accreditation with ALL suppliers

SmartViewPlus™ is Professional Energy Services' online, real-time reporting technology that empowers us to help you reduce energy consumption and pay less for the energy you do use.

SmartViewPlus™

Information is power

SmartViewPlus™ is the world's leading online energy information portal. It places your energy usage data at your fingertips enabling Professional Energy Services to go even further in reducing your energy use and business costs.

SmartViewPlus™ enables us to do more for you

Through analysis of the real-time data SmartViewPlus™ delivers, Professional Energy Services analysts are equipped to make recommendations as to how you can make more efficient use of energy and how to reduce your company's carbon emissions. As carbon is taxed and energy becomes more expensive, SmartViewPlus™ will enable Professional Energy Services to assist you in ways that can deliver significant returns to your business and capitalise on upcoming opportunities.

Negotiate from a position of power

SmartViewPlus™ gives us an unprecedented ability to advise you on how to further minimise energy costs. With SmartViewPlus™, we're able to help businesses negotiate the best contracts based on the most accurate information possible.

Professional Energy Services

SmartViewPlus™

Energy information – how and when you need it

SmartViewPlus™ provides Professional Energy Services clients with critical insights and information about energy usage and resulting carbon emissions through a range of interactive reports that are easy to access and understand.

Utilising the real-time data delivered from your smart meter, SmartViewPlus™ tracks and compares data to deliver information including:

- Total energy produced and consumed
- Hourly, daily, weekly, monthly and annual usage profiles
- Site comparisons
- Best practise overlays and comparisons
- Excess load reports and warnings
- Energy audits and power factor correction to further reduce usage
- Carbon emissions

Compliance made easy

SmartViewPlus™ will assume even more importance with the Federal Government's stringent new emissions reporting requirements (soon to be made compulsory for smaller businesses), by helping to establish your corporation's carbon footprint under the mandatory scope areas. This is necessary to determine if and when your corporation will be required to report based on current thresholds. It also enables your staff to measure their own emissions performance and take an active role in carbon signature reduction.

Technology that's easy to use

With no software to install, SmartViewPlus™ is easy to access requiring only a secure Internet connection. Any number of authorised users can securely access this information with a username and password. User and Site Administration functions are all provided intuitively through the SmartViewPlus™ web interface.
